Lists, Colours and Figures

Technical Writing Practical

1 Lists

Following are some technologies that can be used to format content:

- LaTeX
- HTML (+CSS)
- Markdown

You would most likely use LaTeX in the following scenarios:

1. To write research papers.
2. To embed mathematical equations within other software.
3. To create CVs, project reports and presentations.

2 Markup Types

Presentational Formatting embedded in text to produce a WYSIWYG result; example: Microsoft Word.

Procedural Markup provides instructions for programs to process text; example: TeX.

Descriptive Labels parts of a document according to meaning; examples: LaTeX and HTML5.

3 Tables and Colours

Table 1: Example table with column widths

Column 1	**Column 2**	**Column 3**
First entry	Second entry	Third entry
Combined row across all columns		
Width: 3 cm	Width: 4 cm	Width: 3 cm

$$T(n) = aT(n/b) + f(n) \qquad T(n) = aT(n/b) + f(n)$$

4 Figures: Rotation and Cropping

The course image files can be placed beside this source as `mnit-logo.png` and `mnit-building.jpg`.

Figure 1: MNIT logo

Figure 2: This is a floating image and can appear anywhere.

5 Multiple Images Using Minipages

Figure 3: This is the first minipage

Figure 4: This is the second minipage
