Collaborative Document

Google Docs Practical Demonstration

Technical Writing | MNIT Jaipur

1. Purpose

This sample document demonstrates structured writing and review elements that can be practised in Google Docs: headings, a table, an embedded diagram, comments, suggestions, sharing, and version history.

2. Document Structure and Formatting

Use the built-in title and heading styles to organize content. A clear heading hierarchy makes a document easier to read and helps readers navigate longer material.

2.1 Review and Collaboration

A document can be shared with a classmate using editing or suggesting access. Comments can be used to ask questions or provide feedback, while suggestions allow proposed changes to be reviewed.

3. Example Information Table

Google Docs feature	Purpose	Practice action
Comments	Give feedback or ask questions	Add a comment to a sentence
Suggestions	Propose edits for review	Switch to Suggesting mode
Version history	Review earlier document states	Open version history
Sharing	Collaborate with others	Share with a classmate

4. Collaboration Workflow Diagram

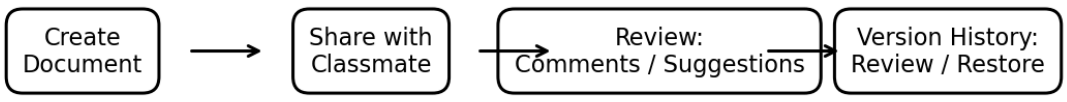

Figure 1. A simple workflow for creating, reviewing and recovering a shared document.

5. Version History

Google Docs saves changes automatically. Version history can be opened to inspect earlier versions and restore a previous state when required. Specific versions can also be named for important milestones.

6. Practice Checklist

- Create a Google Doc and share it with a classmate using Edit or Suggest access.
- Apply headings and add a comment and a suggested edit.
- Insert a table and embed an image or diagram.
- Open version history, inspect an earlier version, and restore it if needed.
